

Kindergarten Program

Rebecca Emerson

The kindergarten program at Twinfield strives to create a child-centered program that emphasizes hands-on activities, creative play, a love of learning, and develops caring friendships. In addition to strengthening children's individual abilities and drive to learn in literacy, math, science and social studies I also include educational experiences within our local community and our surrounding environment. We take field trips to the libraries, the apple orchard, a turkey farm, and a visit with our local firefighters. With an emphasis on language development, social skills and problem solving, I hope to provide a foundation for their future learning. To help me do this, I attend workshops and conferences to provide me with current best practices for my students' academic, social and behavioral development.
